About Me

IT Engineering student specializing in Data Science, Machine Learning, and Deep Learning. Proficient in Python, exploratory data analysis (EDA), data pipelines, and building autonomous agents. Strong foundation in statistical analysis, data structures, and advanced ML modeling (regression, classification, clustering) with a proven track record of deploying end-to-end intelligent applications.

EDUCATION

Bachelor of Technology (B.Tech), Information Technology (2023 – 2027)

Abdul Kalam Technical University, Lucknow

Current CGPA: 8.5/10

PROJECTS

Chatbot:

- Developed a stateful chat application using LangGraph and Streamlit, enabling robust multi-turn user interactions and real-time token streaming using `st.write_stream`.
- Implemented persistent memory tracking by integrating an SQLite-backed checkpointing framework (SqliteSaver) to securely store chat states and session histories mapped to unique `thread_id` keys.

Autonomous Agentic Data Cleaning Pipeline:

- Architected an end-to-end multi-agent LLM workflow using LangGraph to automate structural profiling, anomaly detection, and programmatic error remediation in enterprise datasets.
- Engineered supervisor-worker agent topologies utilizing structured JSON tool-calling and automated execution scripts to optimize pipeline throughput and streamline data preprocessing cycles.

Movie Recommendation System:

- Engineered an end-to-end Content-Based Movie Recommender System using Python and Pandas to extract, clean, and process multi-dimensional text features from a dataset of 4,800+ titles.
- Implemented an NLP pipeline utilizing NLTK (PorterStemmer) and Scikit-learn (CountVectorizer) to build a text-feature matrix, applying Cosine Similarity to compute vector distances for low-latency recommendation retrieval.

Virtual Assistant:

- Architected a voice-activated AI Agent engine utilizing LangChain and Groq (Llama-3.3-70B) to dynamically process conversational history and orchestrate complex local automation workflows.
- Engineered a multi-modal runtime pipeline integrating Google Speech Recognition API for audio transcription, pyttsx3 for real-time text-to-speech synthesis, and custom system tools for desktop execution and web searching.

Cats vs Dogs Classifier:

- Developed a Cats vs Dogs Image Classifier using TensorFlow, Keras, and VGG16 transfer learning, leveraging fine-tuning techniques to accurately classify images into binary categories.
-

INTERNSHIPS

- **AI-ML Virtual Internship-EduSkills** (01/26-03/26) - Completed a 10-week AI-ML virtual internship with EduSkills, gaining hands-on experience in data analysis, model building, and real-world problem-solving using industry-relevant tools and techniques.
 - **Data Analytics Process Automation Virtual Internship** (07/24-09/24) – Gained experience in data processing, automation workflows, analytical reporting, and industry-based studies.
-

CERTIFICATIONS

- Google Data Analytics Certificate – Google 2025
 - IBM Data Science Certificate – IBM SkillBuild 2025
 - Claude with the anthropic API – March 2026
-

SKILLS

Python, SQL, Java, Scikit-learn, Feature Engineering, Model Training, Predictive Modeling, Model optimization, statistical modeling, Data Warehousing, A/B testing, CI/CD Pipelines, TensorFlow, Neural Networks, LangChain, LangGraph, Autonomous Agents, Git/GitHub, Docker, Streamlit, AWS, Tableau, Jupyter Notebook, VS Code, Pandas, NumPy, Matplotlib, Seaborn, Power BI, Excel, Exploratory Data Analysis, Data Structures & Algorithms (DSA), Object-Oriented Programming, Problem Solving, Cross-Functional Collaboration, Technical Communication.
